

1. Launch Eclipse Ganymede, then you will be asked to input a workspace. Please enter a directory where you want to write your programs and click "OK".

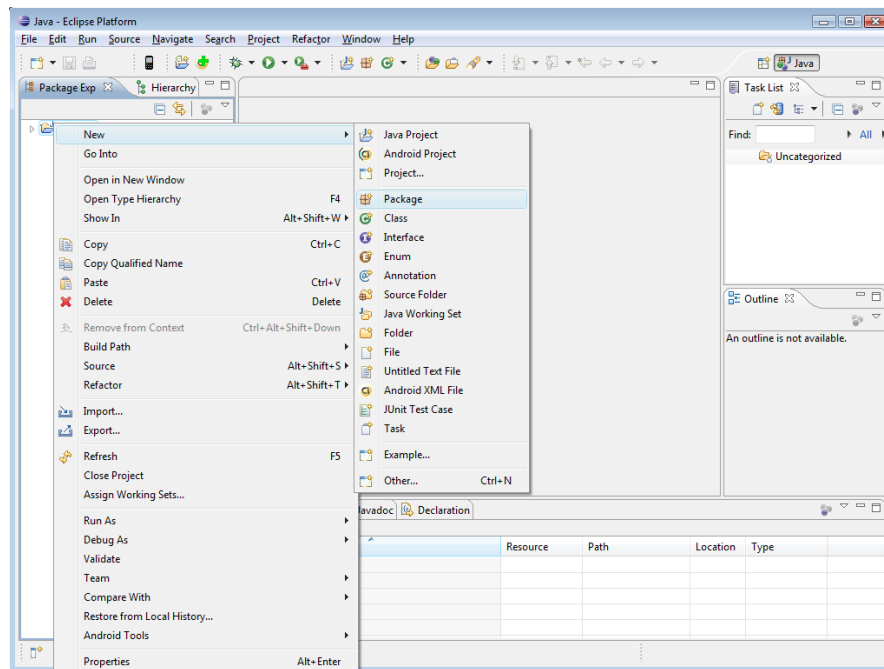

2. If you see a "Welcome" page, close it. Note: do not close the whole software. Then select "File->New->Java Project" to create a Java Project.

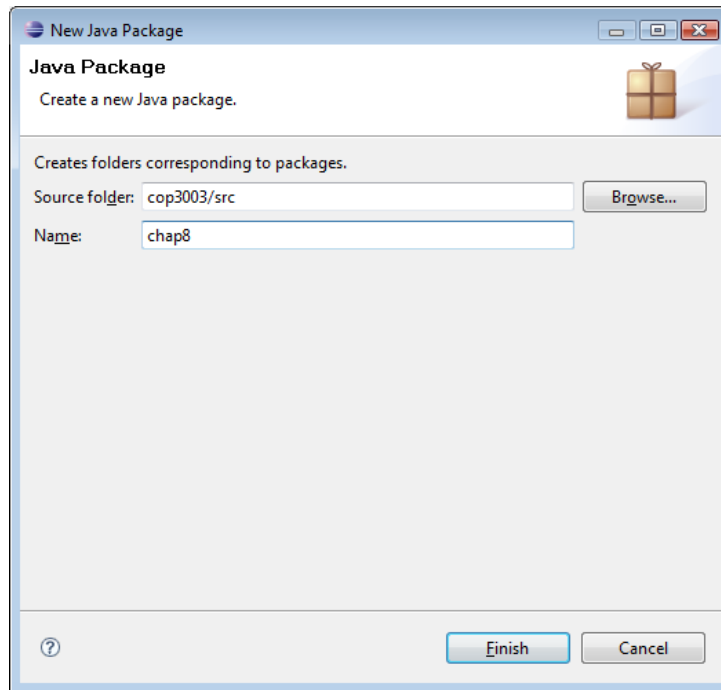

3. Then name your project and click “Finish”.

- Next you will see your project in the "Package Explorer". Right-click the project and select "New->Package"

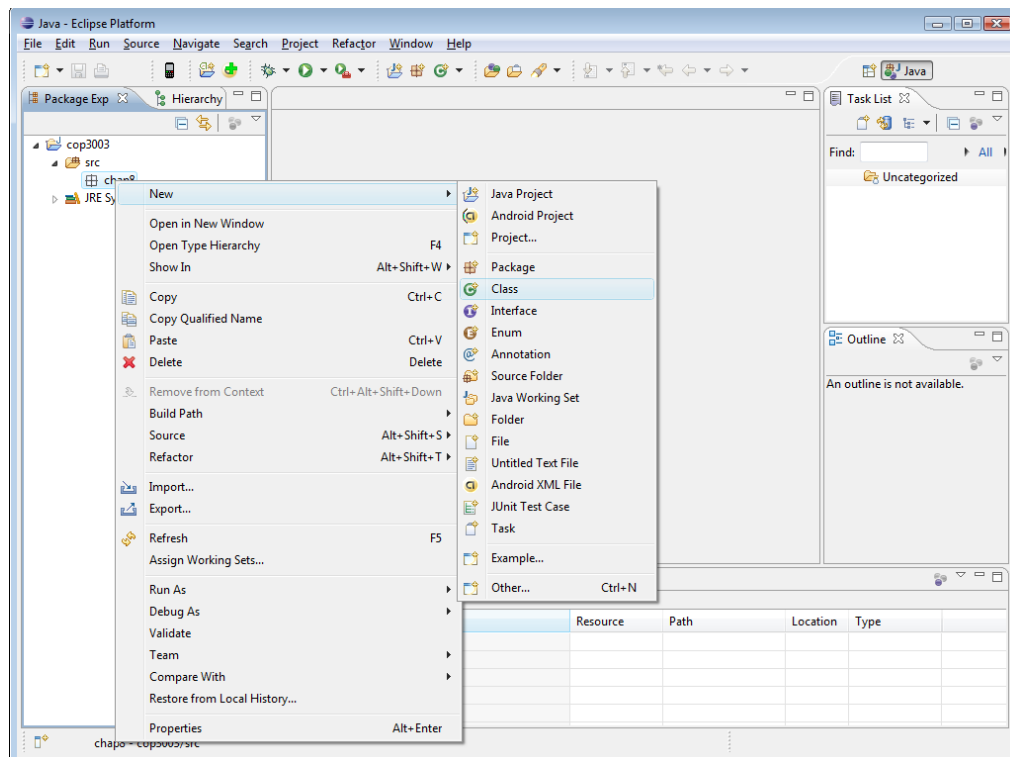

5. Name the first package: chap8.

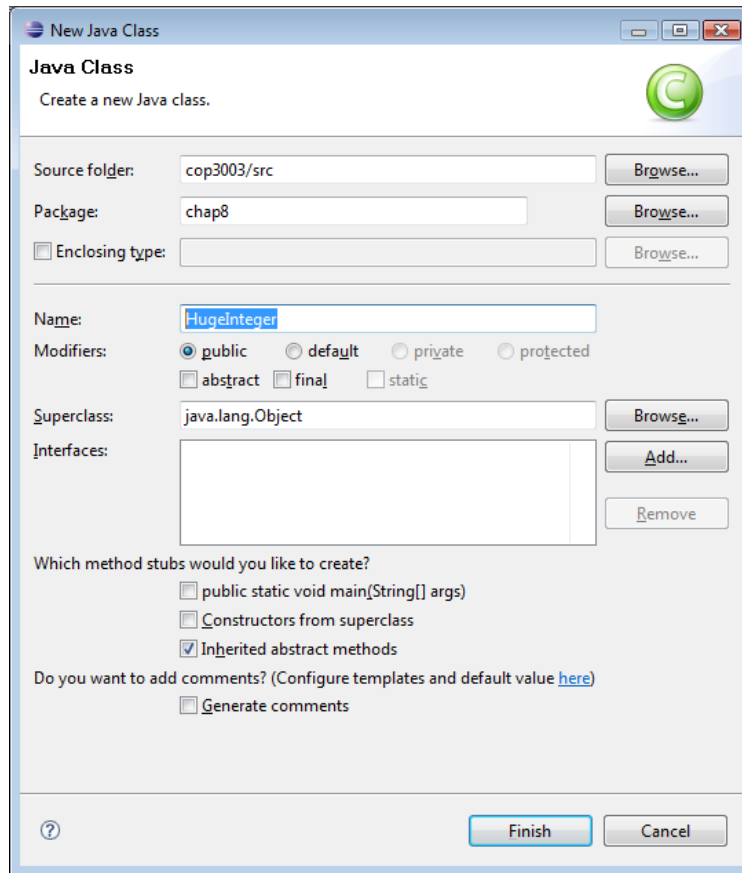

6. Now you have created a package: chap8. Please go to your workspace to see that Eclipse has created the following folder:

C:\temp\cop3003\src\chap8

7. Now, please create a class under package chap8 as follows.

8. Name your class `HugeInteger` and click “Finish”.

9. Now Eclipse has created a file for you to edit.
